

ARTHRO**VIMS**[®]
SOFT ANCHOR

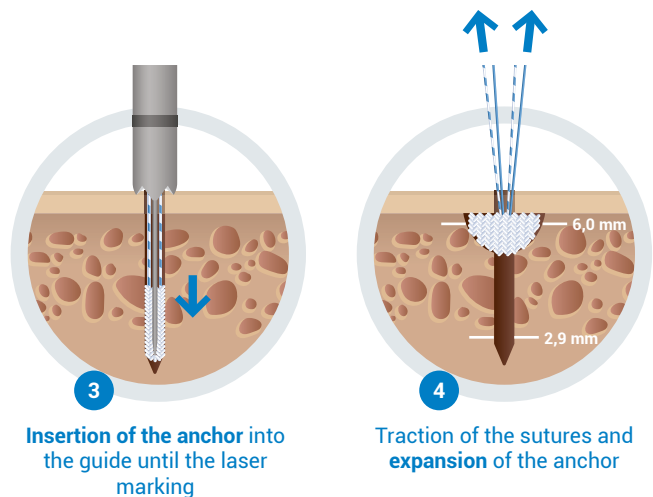

ALL SUTURE ANCHOR

It is specially designed for the fixation of soft or prosthetic tissues to the bone

ARTHROVIMS SOFT ANCHOR are impacted anchor of small diameter exclusively composed of textile fibers.

The polyester body of the anchor is associated with one or two UHMWPE suture threads and/or tapes which are mounted on a disposable insertor allowing insertion into the bone.

The traction on the suture threads makes it possible to modify the shape of the body of the anchor which thus locks itself behind the cortical bone and ensures an effective anchorage.

Bone economy compared to a screwed anchor
